About Okobilanz

Okobilanz is a company dedicated to re-define bio-organics for industrial processing. Okobilanz is formed keeping in mind, the concern for the environment. The word Okobilanz is inherited from the German word meaning "Balancing Environment".

Okobilanz is a first company in the world focused on re-defining bio-organics for industrial processing to save energy, time and reduce pollution. We have time-tested products having low risk, less effort, better quality, cost effective and more yield to our customers.

Our strengths

- Brand creation and promotion support
- State-of-the-art manufacturing facilities
- Stringent QC process at every stage to maintain the quality of raw materials and finished products
- Research and Development facility to detect root cause of problems

Okobilanz operates on the following concepts

- ➔ Eco-friendly products based on re-defining bio-organics
- ➔ Ready to use products with existing chemistry
- ➔ Raw Materials
- ➔ Brand Creation and Promotion (Valuation)

Eco-friendly Products based on Re define Bio-organics

We provide balanced solution using both Bio-chemistry and Organic chemistry. Our technology is therefore, a breakthrough expertise since we use the combination of two dominant technologies. In industrial applications, Bio-chemistry or Organic chemistry single-handedly cannot offer a revolutionary or eco-friendly solution respectively. With the amalgamation of both bio-chemistry and organic chemistry, we are committed to offer our customers with low risk and less effort solutions. Moreover, our solutions provide more yield with better quality and lesser cost.

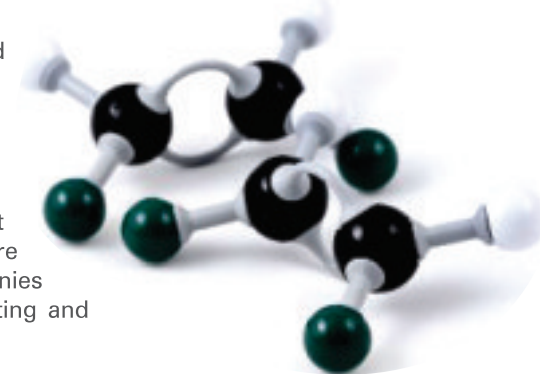

Features

- Eco-friendly solutions
- Sustainability
- Saves time, water and energy
- Universal solutions for industries
- As our products are concentrated - it demands less packaging and transportation cost
- Lower pollution

Ready to Use Products with Existing Chemistry

We produce finished product based on the samples and/or specifications provided by the customer. With our stringent quality checks at every stage of the process, we ensure and commit to deliver the product without compromising on the quality.

Nowadays, the speed of technology transfer is rapidly increasing with the increase in the market demands. Manufacturing a chemical composition needs significant investments for setting up manufacturing plant and machinery. Secondly, there are chances of incurring additional overheads, which compel most small-sized companies to shut their operations. Moreover, there is an additional overhead of marketing and maintenance costs, which the company needs to consider.

we are bridging the gap between cost and quality of existing chemistry products

We can help clients produce products matching the chemical compositions and specifications of the supplied sample in our own manufacturing plant. We produce the products in the following situations:

- The customer needs some product and knows the specifications
- The customer knows the name of the renowned company product or have sample of some product

Our state-of-the-art manufacturing facilities allow customers to reduce the overheads related to the manufacturing facilities.

Raw Materials

Quality products can deliver their quality only when they are manufactured using quality raw materials and accurate chemical composition. With the availability of advanced manufacturing and quality checks facility, Okobilanz has the capability to deliver best quality raw materials to the customers. All our raw materials are rigorously tested to ensure that the final product meets the desired specification.

Brand Creation & Promotion (Valuation)

Join a Winning Team

Imagine the prestige of owning your own successful brand. Be an independent business owner; provide customized solutions for industrial processing. Pioneering a unique approach, we provide you complete copyright of the product, which would help in re-branding the product with the name of your choice.

We are flourishing nationwide and looking for right people to join our team. We provide a turnkey business package that has everything you need to be successful without charging any royalty fees.

How this Concept will Benefit You and the Industry (end customer)

You are creating your own brand by giving customerized solution to your end customer also helping them in their day to day activity by providing new solution depend on the substrate, process condition and also climate condition.

Developing customerized solution need two things

- 1 Understanding the customer for a prolong time and continuous interaction with customers
- 2 Duplicating processes condition in R&D and getting to the root cause.

With above things at Okobilanz help associates to use R&D and Modern Manufacturing set up at the same help customers with knowledge from our associates.

Benefit for the end customer

In all industries optimization of the use of Natural resources, Energy, time, plant, and maximum yield is the key to success. Here this is happening only through a deep understanding of process, process condition, and substrate. In Many cases to cope with the adverse situation the Industries using more energy, Time or more chemicals or Enzymes. At Okobilanz we analyze the root cause of problems and furnish effective customerized solution with our R&D with our Modern manufacturing facility.
